

Arduino Board Setup

Arduino Board

NOTE: Make sure battery switch is OFF.

Step 1

- Connect red battery wire/connector to positive side of strip.
- Connect black battery wire/connector to negative side of strip.

Step 2

- Connect all black (negative) servo wires to negative side of strip.
- Connect all red (positive/middle wire) positive side of strip.

Step 3

- Connect all servo signal wire (yellow) to correct pin on arduino. See picture at top for correct pin location. Repeat for all servos remaining...

Step 4

- Connect a red wire/connector from positive side of strip to Vin. See picture at top for correct pin location. Connect a black wire/connector from negative side of strip to GND. See picture at top for correct pin location.
